

GOATOTB — 20 % Discount Code Setup

Step-by-step to attach a 20 % discount offer (code `GOATOTB`) to ChessEver's **existing** Premium subscription products on iOS and Android. No new products are created — the offer hangs off the subscriptions you already sell.

Step 1 — Compute the discounted price

You don't enter "20 %" anywhere. Both stores ask for an absolute price. Calculate it once, use it on both:

```
discounted_price = regular_price × 0.80
```

Product	Regular price	Enter as discounted price
Premium Annual	\$ ____.	\$ ____ (× 0.80)
Premium Monthly (if applicable)	\$ ____.	\$ ____ (× 0.80)

Repeat for every storefront/territory price tier you support. Apple and Google will offer the equivalents in local currencies automatically.

ios Step 2 — App Store Connect

1. Sign in to `appstoreconnect.apple.com` → **Apps** → **ChessEver**.
2. Sidebar → **Subscriptions** → click **Premium Annual** (or whichever subscription this code covers).
3. Scroll to **Subscription Offer Codes** → click **Create Offer Code**.
4. Fill in:
 - **Reference name:** `GOATOTB`
 - **Eligibility:** tick *New customers* and *Existing customers (expired)*
 - **Offer type:** *Pay as you go*
 - **Duration:** 1 period (= first year if annual, first month if monthly)
 - **Price:** the discounted price you calculated in Step 1
5. Add territories (typically *All available*).
6. Choose **Custom code** → type `GOATOTB` in caps → set a redemption cap (e.g. 10 000) → save.

7. **Repeat steps 2–6 for Premium Monthly** if you want the code to work on monthly too. Use the same string `GOATOTB` — Apple keys offers per-product and the redemption sheet picks the right one based on what the user is buying.

Android Step 3 — Google Play Console

1. Sign in to `play.google.com/console` → pick **ChessEver**.
2. Sidebar → **Monetize with Play** → **Subscriptions** → click **Premium Annual**'s base plan.
3. Click **Add offer**.
4. Fill in:
 - **Offer ID:** `goatotb-20off`
 - **Eligibility:** *Developer-determined* (this lets a promo code unlock the offer)
 - **Phase:** add one phase
 - Type: regular phase
 - Duration: 1 billing cycle
 - Price: the discounted price from Step 1

Save the offer.

5. Sidebar → **Promo codes** → **Create promo code**.
 - **Promotion type:** *Custom code (vanity)*
 - **Code:** `GOATOTB`
 - **Applicable products:** tick the offer you just created (`goatotb-20off`)
 - **Max redemptions:** e.g. 10 000
 - **Start / end dates:** set as you like

Create.

6. **Repeat steps 3–5 for Premium Monthly** if you want the code to work on monthly too. Same code string, separate offer per base plan.

Step 4 — Verify

1. On a real device, sign into a different Apple ID / Google account than your dev one.
2. Open ChessEver → paywall → **Have a code?** → enter `GOATOTB` .
3. You should see the discounted price in the store's confirmation sheet (e.g. "*First year for \$X.XX, then \$Y.YY/year*").
4. Confirm the redeem. ChessEver should unlock Premium and play the celebration animation when the sheet closes.

What users will see when they redeem

First billing cycle at the discounted price (your 80 % number), then auto-renews at the regular price thereafter. The discount applies once — the next renewal is full price. This is how both stores express "% off" subscription codes.
